The Little Pink Book
A brief guide to breast health
Be breast aware

Breasts come in all shapes and sizes and will change throughout your life. Your menstrual cycle, pregnancy, age and weight may alter the size, shape and feel of your breasts.

Being aware of the changes and knowing how your breasts feel at different times will help you to understand what is normal for you. If you are familiar with your breasts you may be more likely to notice any unusual changes that could be a sign of breast cancer.
Breast pain

Many women will experience breast pain during their lives.

Breast pain is rarely a symptom of breast cancer.

Common causes of breast pain include hormonal changes, weight gain, bra problems and infections.

If you have breast pain that lasts a long time, or keeps coming back, it is advisable to talk to your GP/family doctor.
What changes should I look for?

Most breast changes are NOT breast cancer. Get to know your breasts and what is normal for you. You should see your GP/family doctor promptly about the following important changes:

- A lump, lumpiness or thickening in the breast or armpit.
- Changes in the skin of the breast such as dimpling, puckering or redness.
- Changes in the nipple such as inversion, new nipple discharge, itchy or ulcerated skin.
- An area of the breast that feels different from the rest.
- New persistent breast pain.
Look in the mirror at your breasts and feel your breasts from time to time.
What is a screening mammogram?

A screening mammogram is a low dose X-ray of a woman's breasts. Screening mammograms are performed on women with no breast symptoms, for the purpose of detecting breast cancer at an early stage.
Who should have a screening mammogram?

BreastScreen WA provides FREE screening mammograms to women 40 years or over with no breast symptoms, and specifically targets women aged 50 to 74 years.

BreastScreen WA encourages women aged 50 to 74 years to have a FREE screening mammogram every two years.

The benefit from having a screening mammogram every two years is greatest for women in this age group. Over 75% of breast cancers occur in women over 50 years of age.

Once you turn 75 you will no longer be sent a letter reminding you to attend for your two-yearly mammogram. However, you are welcome to phone BreastScreen WA on 13 20 50 for a free appointment.
Family history of breast cancer

Most breast cancer occurs by chance alone and is not caused by genetic factors. Between 1-5% of all breast cancers are inherited.

Approximately 9 out of every 10 women who develop breast cancer do not have any family history of breast cancer.

If you are concerned about your family history of breast cancer, you should discuss your individual circumstances with your family doctor.

If there are any new cases of breast cancer diagnosed in your family, please inform both BreastScreen WA and your family doctor.
What if I am a woman under 40 years?

Woman under 40 years are not eligible to attend a screening mammogram at BreastScreen WA. Young women under 40 years have much denser breast tissue than older women, so it is more difficult for screening mammograms to show the changes that may indicate cancer.

Women with implants

Women with implants are able to attend the screening mammogram program. It is important that BreastScreen WA knows if you have implants as special X-ray techniques will be used. More X-rays will be taken and extra time will be needed. Please inform BreastScreen WA when making an appointment and also advise the screening centre staff when you arrive for your appointment.
Dense Breasts

Breast density describes how breasts look on a mammogram not how they feel on examination.

Dense breasts are common and normal, occurring in about one third of women over 50 years.

Research shows higher breast density is associated with an increased risk of breast cancer.

Breast density can hide breast cancers that also appear white on a mammogram.

BreastScreen WA informs women if their breasts are dense.

It is recommended that these women see their GP for a breast examination and advice.
The greater the density, the more white areas on the breast X-ray, and the less obvious the dot.
How is a screening mammogram performed?

A specially trained female radiographer will take your mammogram. To obtain a clear picture and to minimise the radiation dose, the breast is positioned and compressed between two flat plates. This may be uncomfortable, but the compression lasts only a few seconds. Usually two X-rays are taken of each breast, one from the side and one from the top. The whole appointment takes less than 20 minutes.

Screening mammograms and radiation

The risk of getting cancer from a screening mammogram is considered to be very low. The benefit of early diagnosis and treatment of breast cancer far outweighs the risk of the small amount of radiation received during a screening mammogram.
How do I book a FREE screening mammogram appointment?

Online bookings are available for most appointments
www.breastscreen.health.wa.gov.au

Alternatively phone: 13 20 50 (for the cost of a local call)
National Relay Service www.relayservice.gov.au

Wheelchair access is available at all BreastScreen WA services.

If you need a free interpreter, please call the Translating and Interpreting Service (TIS) first on 13 14 50, and ask to be connected to the BreastScreen WA call centre on 13 20 50.
Group bookings

Group bookings are available for those women who would prefer to attend as a group.

For example, a group of women who speak a language other than English, Aboriginal women, women in clubs or associations, or friends may find it more comfortable to book as a group.

For further enquiries about group bookings please phone 13 20 50.
Where can I have a FREE screening mammogram?

BreastScreen WA has 11 permanent clinics - see following pages for maps.
There are also four mobile clinics which visit country towns every two years. Some towns are visited annually. Please see www.breastscreen.health.wa.gov.au/Breast-screening/Rural-and-remote-women to find the approximate visit date for your town.

Any questions?
The staff at BreastScreen WA are happy to answer your questions. Please phone (08) 9323 6700 or 13 20 50.
